

DIGITAL-EMOTIONS · DIGITAL-PLANT

DSC-HUB Marketing Strategy

Campaign architecture, ethos, and the complete creative library

Version: 1.0 · 7 July 2026 · **Assets:** 31 finished creatives across four packs, all with editable SVG sources · **Status:** pre-reveal — deployment gated on hardware testing

Contents: Ethos & Reasoning · Strategy Overview · Audiences · Platforms · Rollout Timeline · Creative Library (31 cards with alt text, primary text, audience & platform) · Governance

1 · Ethos & Reasoning

DSC-HUB did not begin as a product. It began as a refusal — a refusal to accept that the intelligence in a grow room should be welded to the hardware it controls, rented back to the person who bought it, and priced as if insight were a luxury. The market this project enters is one where a \$499 device watches a room but cannot touch a fan; where an "AI" controller acts, but only upon its own brand's accessories at three to four times the going rate; where the word "smart" on a duct fan means the fan has been granted the ability to look after exactly one thing: itself. The economics of that market are not an accident. They are a business model — the ecosystem as enclosure, the customer as recurring revenue, the knowledge as moat.

The founding observation of DSC-HUB is almost embarrassingly simple: **a fan is a fan, a light is a light, a pump is a pump**. Strip the branding away and every piece of grow equipment on Earth works the same way underneath — it moves air, emits light, or pushes water, and it does so in response to signals that were standardised decades ago. There is no technical reason a controller must care what badge is on the box. So this one doesn't. DSC-HUB is built around *how equipment works* rather than *who sold it*, which makes it brand-agnostic not as a feature but as a consequence. The invitation that follows is the project's voice in a sentence: *come with what you've got — we'll make the most of it*.

Knowledge shouldn't have a price of admission. If you're willing to do the work, the knowledge is free. If you'd rather pay with money than time, that option exists too — and you only ever pay once.

The second refusal concerns access. The entire intelligence of the system — the stage engine, the escalation logic, the photoperiod, the safety layers — compiles to a single file of roughly ninety kilobytes. A photograph of the chip it runs on is larger than the firmware itself. Something that small, that reproducible, and that useful has no business sitting behind a paywall. The firmware is therefore free. The build guides are free. The parts list is pocket money, and for those with no pocket money at all, the Dumpster Edition treats the world's sixty-two million annual tonnes of discarded electronics as exactly what it is: a fully stocked parts catalogue. Dead printers contain fans. Retired servers contain power supplies. Aquarium pumps become irrigation lines. **Zero dollars is a valid budget**, and designing for salvage is not charity — it is engineering discipline, because a system that runs on rescued parts is by definition a system with no fragile dependencies.

None of this makes the project an exercise in asceticism. There is a commercial path — a pre-assembled Version 3 on a professionally printed board, sold at a premium alongside a DIY edition priced as a donation — and an ecosystem of a dozen wireless modules behind it, from soil chemistry and CO2 dosing to PPFD-steered lighting and full water-cycle diagnostics. But the ethics of that expansion are fixed in advance by two rules. First, **the paid tier only ever charges for convenience** — assembly, polish, support — never for capability; nothing is held back from the free version to make the paid one attractive. Second, **the Hub will never need any of its accessories**. The base product is complete on the day it ships and stays complete forever. People should expand their system because they got curious, not because they got cornered. Expansion by desire, never by design — an ecosystem should grow things, not fence them in.

And then there is the reason it was built *here*, in this category, first. Cannabis growing is the hardest consumer horticulture problem that exists: legally constrained into cupboards, garages and sheds; climatically hostile; populated by outliers improvising in rooms plants were never meant to inhabit. That difficulty is the point. A control system proven in the worst rooms on Earth is proven everywhere — which means the same ninety-kilobyte brain that keeps a tent alive in a Newcastle winter can keep lettuce alive in a shipping container, herbs alive in an

apartment stairwell, food alive wherever food needs growing and conditions refuse to cooperate. The long game was never really about any one crop. It is about making the skill of growing — the actual, transferable, un-repossessable capability — cheap enough to give away and robust enough to trust. Built where growing is hardest, from parts the world threw away, so that anyone, anywhere, can put food on a table. One day, somewhere, that is going to matter. That day is the whole point.

2 · Strategy Overview

The campaign is organised as four packs in three registers, released across five roadmap phases. Every asset works standalone; sequenced, they form a single story that runs **absurdity** → **philosophy** → **capability** → **emotion** → **independence** → **poetry** → **economics** → **resourcefulness** → **future** → **mission**.

Pack	Register	Assets	Job
Teaser + Ad pack (T0, A1–A9)	Product	10	Standalone ads and hooks. First contact, shares, arguments.
The Ten Chapters (CH.01–10)	Story	10	The sequenced narrative. CH marks invite following without demanding it.
The Long Game (E1–E6)	Ethos	6	Why the company exists. Never sells. Runs 1 per 3–4 product posts.
Finale (F1–F5)	Hype	5	Synthesis closers deployed as momentum peaks, ending at the reveal.

2.1 Core messages (fixed vocabulary)

- **The nine words:** Controls everything. Locked to nothing. Built from anything.
- **The belief:** A fan is a fan. A light is a light. A pump is a pump.
- **The promise:** The brains are free. Pay with time, or pay with money — never both.
- **The rule:** The Hub will never need any of them. You might just want them.
- **The mission:** Built for the worst rooms on Earth. One day, somewhere, this is going to matter.

2.2 Target audiences

Segment	Who they are	What lands	Where they live
The Tinkerer	ESPHome / Home Assistant / maker community; builds for joy; allergic to cloud dependencies	90 KB flex, free firmware, Dumpster Edition, local-first stories	Reddit (r/homeassistant, r/esp32), Hackaday, HN, Mastodon, Discord
The Grower	Hobby growers in tents and converted spaces; budget-aware; already burned by 3am scares	3:07 AM, We Built a Sky, the cloud puns, "just works"	Instagram, grower forums, r/microgrowery, Facebook groups
The Burned Buyer	Owns (or was priced out of) big-brand ecosystems; resents lock-in and accessory pricing	The \$91 Sticker, the Receipt, the market table, Trap vs Feed	X, Reddit, comparison-shopping searches
The Resilience Crowd	Homesteaders, permaculture, food-security minded; hope-driven, not fear-driven	Worst Rooms on Earth, Knowledge Doesn't Run Out, One Day Somewhere	YouTube, Facebook groups, LinkedIn (E2), podcasts
The Values Follower	Right-to-repair, FOSS, anti-subscription; follows companies that write promises down	The Manifesto, Dead Tech Living Future, Reuse by Design, E4	Mastodon/Fediverse, HN, Framework/iFixit-adjacent communities

2.3 Platform strategy

Platform	Role	Rules of engagement
Instagram	Visual home; the chapters as a highlight; growers + general	Deniable artwork only (already true by construction); pun captions trimmed; 4:5 exports for feed
X / Twitter	Argument engine: receipts, tables, Trap vs Feed, 90 KB	Post the artwork, fight politely in replies; quote-posts are free distribution
Reddit	Community launches — content, never ads	Lead with the build video and guides in relevant subs; the creatives support, they don't open
YouTube	The build video is the campaign's centre of gravity	CH.07 + F4 are its poster and launch post; community tab carries the chapters
Hackaday / Hacker News	The 90 KB story and the Dumpster Edition are front-page material	Submit as engineering stories, not marketing; the ethos essay is the About link
Mastodon / Fediverse	Values audience; disproportionate word-of-mouth	E-pack native register; free-forever promises land hardest here
Discord	The community home once the rally posts convert followers to builders	Manifesto pinned; CH.09 grid as the roadmap channel art

2.4 Rollout timeline (mapped to the product roadmap)

Phase	Product milestone	Creative deployment
0 · Prove	Hardware testing; capture real HA graphs, overnight saves, outage survivals	Nothing public. Bank the receipts that upgrade A4/A7 from story to evidence.
1 · Tease	—	T0, then CH.01–CH.06 drip (one every 3–4 days). First Long Game post (E1) mid-drip.
2 · Give	Build video + parts cart (affiliate) + firmware release	CH.07 and F4 on launch day; A-pack ads sustain; Dumpster guide → CH.08 + E3; HN/Hackaday submissions (F2 story).
3 · Grow	Community feedback era; final firmware changes	Long Game cadence (1-in-4); repost community builds; real-data upgrades of 3:07 AM and offline story; E4/E5 promises go live once V3 pricing is locked.
4 · Reveal	V3 PCB launch: premium assembled + donation DIY	CH.09 (grid) → F1/F3 push → F5 on reveal eve → reveal with the User Manual as the payoff artefact. CH.09 reruns per module launch, tiles lighting up.

2.5 Measures that matter

Saves and shares over likes; firmware downloads and guide traffic over impressions; Discord joins and *community build submissions* over follower count. One completed stranger-build posted publicly is worth more than any reach metric — it is the campaign's only real proof of concept. The single highest-value asset the campaign still lacks is a documented non-cannabis grow (lettuce in a shed on salvaged parts): it retroactively proves every claim in every register.

2.6 Governance: promises, claims, and platform safety

Promise-weight assets. E4, E5 and CH.07 are public commitments: firmware and guides free forever; the paid tier charges for convenience only, never capability. Post them only when that pricing is locked, because walking them back costs more than never posting them.

- **Price claims** (\$499/\$305/\$199/\$156/\$65/\$119/\$470, \$1,512.13 total) date from July 2026 retail screenshots. Refresh before paid promotion; the artwork carries dated footnotes for this reason.
- **"95% cheaper" is deliberately absent.** Until a public DSC-HUB price exists, "a fraction of the price" is used; once the BOM/cart lands, replace with a checkable "under \$X".
- **"Any brand" scope answer** (one line, for comments): if it plugs in or takes a standard fan/light input, the Hub can run it.
- **Platform safety by construction:** no plant imagery, no consumption references anywhere in artwork; vocabulary is grow/room/tent/crop/food. The cloud-pun wink lives only in captions, trimmed per platform. Keep captions equally clean when boosting.
- **62 Mt e-waste figure:** UN Global E-waste Monitor; cite it in captions for major pushes.
- **Competitors are never named in artwork.** Categories + prices tell the story; the moral high ground is part of the brand.

3 · Creative Library — 31 assets

Every card: embedded artwork, accessibility alt text, primary text (the caption to post), target audience, platforms, and usage notes. All assets have editable SVG sources in their pack folders; A-pack items duplicated in the Chapters note their series twin.

T0 · The Signal (pre-campaign teaser)

ALT TEXT

Dark square graphic with glowing green terminal telemetry (temperature, humidity, VPD, fan percentages) and a typed status line reading 'Running: lowering humidity, raising airflow, holding negative pressure. VPD → 1.2' with a cursor. Headline: 'Your grow room is getting a brain.'

PRIMARY TEXT / CAPTION

It watched the humidity climb for four minutes before deciding the fans couldn't win alone. Then it did something about it. No cloud. No subscription. No app between you and your climate. Reveal soon.

Audience	Tinkerers & growers simultaneously — deliberately ambiguous first contact
Platforms	Instagram, X, grower forums
Usage	Post before anything else. The mystery post: no product, no price, just a machine narrating itself. Portrait 1080×1350 variant available.

A1 · The \$91 Sticker

ALT TEXT

Light cream poster, giant black type: 'Their “smart” fan costs \$156. It controls itself.' Below in green: 'A \$65 fan plus one hub runs the whole room.'

PRIMARY TEXT / CAPTION

A “smart” duct fan is \$156. The identical fan without the sticker is \$65. What's the \$91 buying? A fan that can look after itself. Not your light. Not your humidity. Itself. We think the smart part should live in one place.

Audience	Burned buyers & price-conscious growers
Platforms	Instagram, Facebook grower groups, Reddit (r/microgrowery as discussion)
Usage	The relatability opener. Series version: CH.01. Run whichever matches context — CH mark for series, clean for standalone ads.

DIGITAL-EMOTIONS

What your money buys right now

Grow monitor	\$499
Watches your room. Can't touch a single fan.	
Smart monitor	\$199
Sends an alert. Then YOU get up and fix it.	
"AI" controller	\$305
Acts — but only with its own brand's gear (\$119 fans, \$470 humidifier).	
Smart duct fan	\$156
Controls exactly one thing: itself.	

One hub watches + decides + acts
Runs the gear you already own — every brand, all at once.

Same job. Any gear. A fraction of the price.
DSC-HUB typical retail prices, July 2026

A2 · What Your Money Buys

ALT TEXT

Dark navy table listing market products with prices: grow monitor \$499, smart monitor \$199, 'AI' controller \$305, smart duct fan \$156 — each with a one-line flaw. A highlighted green box: 'One hub — watches, decides, acts.'

PRIMARY TEXT / CAPTION

\$499 to watch. \$199 to get a notification. \$305 to act — as long as everything is the same brand. Or \$156 for a fan that manages exactly one device: itself. Nobody sells the obvious thing: one brain, your gear. So we built it.

Audience	Burned buyers, comparison shoppers
Platforms	X (quote-post bait), Reddit, Facebook groups
Usage	The share-and-argue post. Refresh the July 2026 price footnote before any paid run.

DIGITAL-EMOTIONS

Watches. Decides. Acts.

- ⌚ Raises and dims your light like a real sunrise
- 🌡️ Keeps air, heat and humidity balanced, 24/7
- 🌞 Wakes the dehumidifier or heater only when needed
- 📺 Screen and dial on the box — no phone needed
- ⌚ Add anything, any brand, any time

Runs entirely in your room — even offline. No subscriptions, ever.
DSC-HUB the start of something bigger

A3 · Watches. Decides. Acts.

ALT TEXT

Dark teal hero with three-word headline and five icon rows in plain language: sunrise-like light control, 24/7 climate balance, wakes appliances only when needed, screen and dial on the box, add anything any brand.

PRIMARY TEXT / CAPTION

It follows your room around the clock, raises your light like a sunrise, and only wakes the dehumidifier or heater when the room genuinely needs it. Screen and dial on the box. Any gear, any brand, it just joins the system.

Audience	All segments — the capability anchor
Platforms	Instagram (pin), website/About, link previews
Usage	The de-facto product page until the reveal. Series version: CH.03.

DIGITAL-EMOTIONS

The internet went down last night.

Your light still faded out at sunset.
Your fans kept the air moving.
The humidity never drifted.

Your grow never noticed.

It thinks in the room, not in the cloud. No servers. No accounts.

DSC-HUB reveal soon

A4 · The Internet Went Down

ALT TEXT

Stark black poster: 'The internet went down last night.' Three grey lines describe the light fading at sunset, fans running, humidity steady. Green punchline: 'Your grow never noticed.'

PRIMARY TEXT / CAPTION

Every cloud controller has the same fine print: it's only as reliable as your Wi-Fi, their servers, and your subscription. DSC-HUB keeps its own clock and doesn't phone home — there's no home to phone.

Audience	Reliability-minded growers, HA/self-hosting crowd
Platforms	Reddit (r/homeassistant, r/selfhosted), Mastodon, X
Usage	The local-first story. Pairs with a real outage graph once testing captures one.

A5 · The Only Cloud

ALT TEXT

Dark graphic with a crossed-out cloud icon. Headline: 'The only cloud is the one you make.' Feature strip beneath: watches climate 24/7, sunrise light, wakes gear only when needed, no account or internet ever.

PRIMARY TEXT / CAPTION

Cloud controllers have a dirty secret: your climate is only as reliable as someone else's server. DSC-HUB keeps everything in the room. The only cloud in this operation is the one at the end.

Audience	Growers (the wink lands), FOSS/anti-cloud crowd
Platforms	X, grower forums, Reddit. Meta: drop the pun line from the caption
Usage	Artwork is fully deniable; the joke lives in the caption where it's editable per platform.

A6 · Zero Cloud. Until Harvest.

ALT TEXT

Black poster with an enormous ghosted zero outline behind centred type: 'Zero cloud.' in white, 'Until harvest.' in green.

PRIMARY TEXT / CAPTION

Four words is all it takes. Everything happens in the room — the watching, the deciding, the acting — with the gear you already own. Internet optional. Celebration not.

Audience	Same as A5 — the compressed sibling
Platforms	Story/Reels title card, X, stickers
Usage	Series version: CH.05. The most merch-able typography in the campaign.

A7 · 3:07 AM

ALT TEXT

Night-blue graphic with a large digital clock reading 3:07 AM. Timeline text: humidity spiked at 2:04, fans went first, dehumidifier woken at 2:09, back in range by 2:19. Green punchline: 'You slept through the whole thing.'

PRIMARY TEXT / CAPTION

An alert at 2am is an admission the product couldn't handle it without you. This one tried the fans first, woke the dehumidifier — not you — and had it back in range by 2:19. You found out at breakfast. If you even checked.

Audience	Every grower who has ever woken up to check a tent — the emotional core
Platforms	Instagram, Facebook groups, Reddit
Usage	Predicted top performer. Series version: CH.04. Upgrade with a real HA overnight-save graph when available.

A8 · The Receipt

ALT TEXT

A white till receipt with torn edges on dark blue: itemised competitor purchases totalling \$1,512.13, lines reading 'APP ACCOUNT: REQUIRED' and 'WORKS WITH OTHER GEAR: NO', then the alternative in green: your gear \$0.00, one hub, 'KEEP THE CHANGE. AND THE GEAR.'

PRIMARY TEXT / CAPTION

We itemised the current way of doing things. The total speaks for itself — and it still only works with its own brand. Or: keep your gear, add one hub. Keep the change.

Audience	Burned buyers, meme-sharers
Platforms	X, Reddit, Instagram
Usage	Receipts get screenshotted; tables get scrolled past. The pack's most shareable artefact.

A9 · We Built a Sky

ALT TEXT

Dark poster, headline 'We didn't build a timer. We built a sky.' in warm gold, above a glowing dawn-gradient curve rising to a sun point and fading to dusk, labelled sunrise/noon/dusk.

PRIMARY TEXT / CAPTION

Plants didn't evolve under a light switch. They evolved under a sky — one that rises slowly, holds, and lets go gently. So that's what we gave them. Every day, to the minute, on its own clock.

Audience	Everyone — the brand-elevation piece
Platforms	Instagram (strongest visual), X, print
Usage	Series version: CH.06. The one that makes the product feel designed, not assembled.

CH.01 · The Price of Smart

ALT TEXT

Light poster identical in message to A1 with a CH.01/10 series mark.

PRIMARY TEXT / CAPTION

See A1. Chapter framing: what's wrong with the market.

Audience	Broadest reach — the series opener
Platforms	Instagram carousel slot 1, X thread post 1
Usage	Opens the arc. The CH mark invites people to follow the story.

CH.02 · A Fan Is a Fan

ALT TEXT

Dark typographic poster: 'A fan is a fan. A light is a light. A pump is a pump.' — third line green. Sub: built around how gear works, not the brand on the box. 'Come with what you've got.'

PRIMARY TEXT / CAPTION

Strip the stickers off and they all work the same way underneath — so we built the brain around how gear works, not the badge on the box. Come with what you've got. We'll make the most of it.

Audience Tinkerers & value-driven buyers — the founding belief

Platforms All platforms; this is the constitution

Usage The most quotable chapter. Belongs in the bio/About of every profile.

CH.03 · Watches. Decides. Acts.

ALT TEXT

As A3 with series mark and 'Turn it on, it just works' line.

PRIMARY TEXT / CAPTION

See A3, plus: turn it on and it just works — on its own shelf, or through Home Assistant.

Audience All segments

Platforms Instagram, website

Usage The capability anchor within the arc.

CH.04 · 3:07 AM

ALT TEXT

As A7 with series mark.

PRIMARY TEXT / CAPTION

See A7.

Audience Growers — emotional peak of the arc

Platforms Instagram, Facebook

Usage Placed fourth deliberately: after logic, hit the heart.

CH.05 · Zero Cloud

ALT TEXT

As A6 with series mark.

PRIMARY TEXT / CAPTION

See A6.

Audience	Growers, FOSS crowd
Platforms	X, Reels title
Usage	The wink, mid-series.

CH.06 · We Built a Sky

ALT TEXT

As A9 with series mark.

PRIMARY TEXT / CAPTION

See A9.

Audience	Everyone
Platforms	Instagram
Usage	The beauty beat before the economics.

CH.07 · The Brains Are Free

ALT TEXT

Light cream poster: 'The brains are free.' Lines: firmware free, build guide free, parts pocket money. Note that a pre-built version is coming for people who'd rather pay with money than time. Green tag: 'Knowledge shouldn't have a price of admission.'

PRIMARY TEXT / CAPTION

The whole brain is one tiny file, and we're giving it away — with the build guide and a parts list that costs pocket money. Want it pre-built? That version is coming too. You only ever pay once: with time, or with money.

Audience	Tinkerers, students, budget growers — and press
Platforms	Reddit, Hackaday/HN (with the build video), YouTube community
Usage	Goes live the same day as the build video and parts cart. Affiliate link in caption, never artwork.

CH.08 · The Dumpster Edition

ALT TEXT

Dark green-black poster: 'Some of the best parts are in a bin right now.' Copy about dead printers, appliances and e-waste full of usable fans, sensors and PSUs. Green punchline: 'Zero dollars is a valid budget.'

PRIMARY TEXT / CAPTION

Dead printers, old appliances and e-waste piles are full of fans, sensors and power supplies begging for a second life. The Dumpster Edition guide will show you what to pull, and how to make it grow. Zero dollars is a valid budget.

Audience	Makers, right-to-repair, broke students — and journalists
Platforms	Hackaday, HN, Reddit (r/functionalprint, r/DIY), Mastodon
Usage	Publishes with the salvage guide. Nobody else in the market would dare post this — that's the point.

CH.09 · The Hub Is Chapter One

ALT TEXT

Dark grid of nine outlined module tiles: climate, soil, CO2, light steering, water, nutrient nurse, canopy air, timelapse, trend box. Bold line: 'The Hub will never need any of them. You might just want them.'

PRIMARY TEXT / CAPTION

Behind the Hub sits a whole ecosystem — climate and soil sensors, CO2, PPFD light steering, irrigation and dosing, water diagnostics, cameras, and a box that keeps every reading at home forever. The rule we won't break: the Hub will never need any of them. You might just want them.

Audience	Existing followers ready to dream; ecosystem-wary skeptics
Platforms	Instagram, X, Discord announcement
Usage	Rerun at every module launch with that tile lit — the grid becomes a public progress tracker.

CH.10 · Built for the Worst Rooms on Earth

ALT TEXT

Dark poster with subtle green glow and a seedling glyph: 'Built for the worst rooms on Earth.' Copy: cupboards, garages, sheds — if it can raise a crop there, it can grow food anywhere. Green line: 'One day, that's going to matter.'

PRIMARY TEXT / CAPTION

We built this for cupboards, garages and sheds — places plants were never meant to live — because if it can raise a crop in there, it can grow food anywhere. One day, somewhere, that's going to matter.

Audience	Everyone — the bridge to the Long Game
Platforms	All platforms; press kits
Usage	The arc's closer and the door into the ethos register.

E1 · Dead Technology. Living Future.

ALT TEXT

Dark poster: a salvaged circuit chip drawn as a plant pot, circuit traces rising and becoming a green stem with two leaves. Caption line: 'salvaged board → living system'.

PRIMARY TEXT / CAPTION

Every dead printer, every retired server, every appliance on a kerb still has working parts inside. We build growing systems out of exactly those parts. Dead technology, living future.

Audience	Values-driven followers, press, merch buyers
Platforms	Everywhere — hero of the register; banner/sticker/shirt candidate
Usage	The thesis in one image. Strongest brand asset in the campaign.

E2 · The Parts Are Already Here

ALT TEXT

Light stat card: giant '62,000,000' — tonnes of electronics thrown away yearly. 'Inside that pile: fans, pumps, sensors and power supplies — everything a farm needs except the seed.'

PRIMARY TEXT / CAPTION

The world throws away about 62 million tonnes of electronics every year. Inside is everything a farm needs except the seed. Our build guides treat e-waste as a parts catalogue — because that's what it is.

Audience	Sustainability audience, educators, press
Platforms	LinkedIn (yes, really), Mastodon, X, press kit
Usage	Abundance framing, not guilt. Cite 'UN Global E-waste Monitor' when boosting.

E3 · Reuse Is the Design Brief

ALT TEXT

Dark poster: 'Reuse isn't a compromise. It's the design brief.' Three translations in green: printer fan → canopy airflow; server PSU → a day of sunshine; fish-tank pump → an irrigation line. 'Nothing needs to be new. It needs to work.'

PRIMARY TEXT / CAPTION

Reuse isn't the budget option — it's the design brief. A printer fan becomes canopy airflow. A server power supply becomes a day of sunshine. A fish-tank pump becomes an irrigation line.

Audience	Makers, repair community
Platforms	Hackaday, Reddit DIY subs, Mastodon
Usage	Concrete beats abstract; the three translations do all the work.

Parts run out. Seeds run out. Knowledge doesn't.

That's why the firmware and every guide we write are free, forever. A skill can't go out of stock, can't be recalled, can't be repossessed.

The only supply chain that never breaks.

DSC-HUB

copy it. share it. teach it.

E4 · Knowledge Doesn't Run Out

ALT TEXT

Light poster: 'Parts run out. Seeds run out. Knowledge doesn't.' Copy commits firmware and guides to free-forever. Green tag: 'The only supply chain that never breaks.'

PRIMARY TEXT / CAPTION

Parts run out. Seeds run out. Knowledge doesn't. That's why the firmware and every guide are free, forever — a skill can't go out of stock, can't be recalled, can't be repossessed. Copy it. Share it. Teach it.

Audience	FOSS community, educators, resilience crowd
Platforms	HN, Mastodon, Reddit
Usage	PUBLIC PROMISE: locks V3 pricing to convenience-only, never capability. Be certain before posting.

We believe:

- 01 Growing food is a human skill, not a subscription.
- 02 The best hardware is the hardware that already exists.
- 03 Repair beats replace. Local beats cloud.
- 04 Knowledge is free, or it isn't knowledge.
- 05 Start with the hardest rooms. The easy ones follow.

DSC-HUB

written down so we can be held to it

E5 · We Believe (The Manifesto)

ALT TEXT

Dark card listing five numbered beliefs: growing food is a human skill not a subscription; the best hardware already exists; repair beats replace, local beats cloud; knowledge is free or it isn't knowledge; start with the hardest rooms. Footer: 'written down so we can be held to it.'

PRIMARY TEXT / CAPTION

We wrote it down so you can hold us to it. Five beliefs, numbered, no fine print.

Audience	Everyone — the accountability post
Platforms	Pinned everywhere; About pages; Discord rules channel
Usage	The company constitution. Same promise-weight as E4.

One day, somewhere, this is going to matter.

Built where growing is hardest, from parts the world threw away — so that anyone, anywhere, can put food on a table.

DSC-HUB

the long game

E6 · One Day, Somewhere

ALT TEXT

Dark poster with soft green glow and seedling glyph: 'One day, somewhere, this is going to matter.' Copy: built where growing is hardest, from parts the world threw away, so anyone anywhere can put food on a table.

PRIMARY TEXT / CAPTION

Built where growing is hardest, from parts the world threw away — so that anyone, anywhere, can put food on a table. One day, somewhere, this is going to matter. That day is the whole point.

Audience	Everyone — the brand closer
Platforms	All platforms; the last slide of any deck
Usage	Pairs with CH.10: that's the product's closer, this is the company's.

F1 · Nine Words

ALT TEXT

Dark poster, three bold lines with green key words: 'Controls everything. Locked to nothing. Built from anything.' Sub: one hub, your gear, any brand, no cloud, no fees, no permission needed.

PRIMARY TEXT / CAPTION

Nine words is all it takes. One hub, your gear, any brand — no cloud, no fees, no permission needed. If it moves air, makes light or pumps water, it's in.

Audience	Everyone — the flagship
Platforms	Profile pins, banners, the answer to 'what is this?'
Usage	Evergreen. If DSC-HUB gets one billboard, this is it.

F2 · 90 KB

ALT TEXT

Light poster with enormous '90 KB' in mono type. Orange line: 'A photo of the chip is bigger than what's on it.' Copy: one tiny file, flash it to a \$10 chip, it just works. Green tag: 'Small enough to give away. Big enough to matter.'

PRIMARY TEXT / CAPTION

The entire brain is one 90-kilobyte file. Take a photo of the chip it lives on, and the photo will be bigger than the firmware. Flash it, wire your gear, done.

Audience	Tech crowd, HN front-page material
Platforms	Hacker News, X, Reddit
Usage	Follow up in comments with a real chip photo + file sizes. The claim is un-falsifiable by construction (first draft failed its own fact-check and was replaced).

F3 · Trap vs Feed

ALT TEXT

Black poster, grey type: 'They built ecosystems to trap you.' Then white and green: 'We built one to feed you.' Sub: every module optional, every guide free, every brand welcome.

PRIMARY TEXT / CAPTION

An ecosystem should grow things — not fence them in. Every module optional. Every guide free. Every brand welcome. Choose the one that feeds you.

Audience	Burned buyers, values crowd
Platforms	X (quote-post magnet), Reddit
Usage	Names nobody; the greyed type does the pointing. Expect arguments — that's distribution.

F4 · The Rally

ALT TEXT

Dark poster: 'Bring your fans. Bring your lights. Bring your pumps. Bring your dead printers.' (printers in salvage gold). Green: 'We'll bring the brain.' Sub: free firmware, free guide, pocket-money parts. 'This is going to be fun.'

PRIMARY TEXT / CAPTION

Bring your fans, your lights, your pumps — and yes, your dead printers. We'll bring the brain: free firmware, free build guide, a parts list that costs pocket money. See you at the reveal.

Audience	Community joiners — converts followers to builders
Platforms	Discord launch, YouTube premiere, Reddit
Usage	Ships the same day as the build video + parts cart.

F5 · SOON.

ALT TEXT

Black poster: ten dim mono lines stacking every campaign tagline like end credits, then one enormous green word: 'SOON.' Footer: 'everything you just read is real.'

PRIMARY TEXT / CAPTION

If you've been here since chapter one, you already know. If you haven't — everything above is real, everything above is coming, and the brains are free. SOON.

Audience	Everyone — reveal-eve
Platforms	All platforms simultaneously
Usage	Nothing posts after this except the reveal itself.

4 · Closing note

Thirty-one finished creatives, three registers, one voice. The campaign's structural bet is that **the ethos is the moat**: prices can be matched and features copied, but "the brains are free", "zero dollars is a valid budget" and "the Hub will never need any of them" cannot be imitated by any company whose business model depends on the opposite. Everything above is loaded. What fires it is Phase 0 — test the hardware, film the build, bank the real graphs — because from CH.01 onward, the campaign's favourite sentence has to stay true: *everything you just read is real*.
